

DIGITAL LITERACY PROJECT REPORT

Title Page

Name: Ayush Singh Baghel

Reg No.: [25MIP10169.]

Branch: CSE(integrated mtech data science and computational thinking)

Year: 1st Year

Course Code: CSE0001

Date: [31/03/2026]

Introduction

This project was completed as part of the Digital Literacy course, where I was assigned the role of a Student Digital Ambassador. The aim of this project was to understand and promote safe, responsible, and professional use of digital tools among students. Through five different tasks, I explored topics such as digital awareness, professional online presence, coding platforms, email etiquette, and cybercrime safety. This project helped me gain practical knowledge about important digital skills that are essential for academic and professional growth.

Task 1 – Digital Literacy Infographic

For this task, I used Canva to design an infographic explaining digital literacy. The infographic included topics such as the meaning of digital literacy, safe internet practices, and useful digital tools for students. I focused on making the design visually appealing and easy to understand.

One challenge I faced was selecting the right layout and organizing information properly within a single page. However, I found the process interesting as it improved my creativity and design skills. This task helped me understand how visual content can effectively communicate important information.

Task 2 – Digital Portfolio

In this task, I created profiles on GitHub, LinkedIn, and HackerRank. GitHub is used to showcase projects and coding work, LinkedIn is for professional networking, and HackerRank is used to practice coding skills.

Over the next four years, I plan to regularly update my GitHub with projects, build connections on LinkedIn, and improve my coding skills through practice platforms. This task made me realize the importance of having a strong online presence for career growth.

Task 3 – Coding & Collaboration Platforms

For this task, I used HackerRank to solve a beginner-level coding problem. This helped me understand basic problem-solving and coding logic. I also created a Google Form quiz on digital literacy and linked it with a Google Sheet to collect responses.

These tools are very useful for academic purposes. Coding platforms help improve technical skills, while Google Forms can be used for surveys, quizzes, and data collection. This task helped me understand how digital tools can enhance learning and collaboration.

Task 4 – Email Etiquette

In this task, I learned how to write professional emails and created two sample emails. I also created a checklist for social media do's and don'ts.

A common issue in digital communication is using informal language in professional emails. For example, sending a message like "Send marks fast" can appear rude and disrespectful. This can create a negative impression. This situation can be improved by using polite language, proper structure, and clear communication.

Task 5 – Cybercrime Awareness

While researching cybercrime, I was surprised by how easily people fall victim to online scams, especially UPI fraud. Many users unknowingly approve payment requests or share sensitive details.

As a result, I will be more careful while making online payments and will always verify links and requests before taking any action. This awareness will help me stay safe and also guide others.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned about online safety, professional communication, and useful digital platforms. These skills will help me in my academic journey and future career.
